

Description

Ready for use special ink for printing lines onto most types of plastic insulated electric wires e.g. PVC, PE, XLPE, Monosil, PA, Tefzel, etc.

Basis Solvent based synthetic resin

Gravure printing, e.g. Medek & Schörner KS or RSD Technik GmbH **Application method**

Form of supply All international colour shades, e.g. RAL, IEC 304 and also metallic shades available

Technical Data* Solid content 30 - 48 % depending on the shade ISO 3251 **Density** 0,95 - 1,45 g/cm3 depending on the shade ISO 2811-1 at 23°C **Viscosity** 25"/6 mm EN ISO 2431 (DIN-cup) 24°C - 43°C depending on the shade ISO 1523 Flash point

Instruction	ı	Info	ormation
Preparation	Stir well before use		Shelf life: 2 years (except special colours) in a well closed can
Dilution	HERKULA Special thinner 17288 to readjust the viscosity in the machine. Amount of thinner depends on the machine.		Standard packaging: 5 I can Check Material Safety Data Sheet as well as instructions on the label
Curing	Print on hot insulations approx. 100°C e.g. after extruder		In case of polyethylene substrates a surface oxidation by corona pre-treatment is necessary in order to achieve good adhesions. It is advisable to pre-cool the plastics material after
Process speed	Up to 400 m/min		
Cleaning	HERKULA Special thinner 35014	extrusion by means of ambient air or water jet (residual water must be blown of).	
			Resistance to "bleeding", no influence on the electrical characteristics, pigments are free of lead and other heavy metal

This technical information was made to the best of our knowledge after conscientious studies of all technical facts. Since specific application and handling of the products in the customer's plant are beyond our control, this company refuses in every respect the responsibility for injury and damage to man and material which may result from the use, stocking and application of our products. We emphasise that all our products are for industrial use only.
